

### ***Abstract of the Invention***

This invention relates to an improved variety of ramie which is more freeze and frost-resistant than previous varieties as well as having improved physical characteristics. The improved species of ramie matures faster on average, has a higher tensile strength, and most significantly, has a finer average denier than prior art ramie.

1. A variety of ramie characterized in that it is more freeze and frost-resistant than previous varieties as well as having improved physical characteristics. The improved species of ramie matures faster on average, has a higher tensile strength, and most significantly, has a finer average denier than prior art ramie.
